

# Assignment Instructions & Submission Template

Coding for Designers, Managers, and Entrepreneurs

**NOTE:** Go to the 'File' menu and then use either 'Make a copy' or 'Download As' to make yourself an editable copy of this template.

# What am I doing?

## Overview

For this assignment, you'll be developing a digital prototype on JS Fiddle. You'll include the design inputs you used, and you can copy these directly from the [design brief](#) and/or modify them yourself.

## Instructions

Also, as you go through these, you may want to delete the **Intro Note** and **Instructions** sections in your copy. (In Google Docs, right-click (or two-finger click on Mac) and select 'Delete Table'.)

## Part 1: User Stories

### Instructions

Please include the stories you worked on. Feel free to also include notes on how you approached. These can come directly from the [design brief](#) or you can write them yourself. However, please make sure they somehow deal with the underlying personas and jobs-to-be-done from HVAC in a Hurry.

### User Stories

[please include the user stories you worked on here along with notes on how you approached them]

## Part 2: Prototypes (OPTIONAL)

### Instructions

If you used Balsamiq to wireframe/prototype as an intermediate step between going from design to code, please include those here. Please note: this is optional.

### Prototypes

[Please include any prototypes you drafted as a prep. step. Again, this step is optional and you can ignore it.]

## Part 3: Links to JS Fiddle

### Instructions

Please include a link or links to your JS Fiddle here.

### Links to JS Fiddle(s)

[Please include links to your JS Fiddle or Fiddles]
